

# Watchdata SIMachine (M2M Solution)

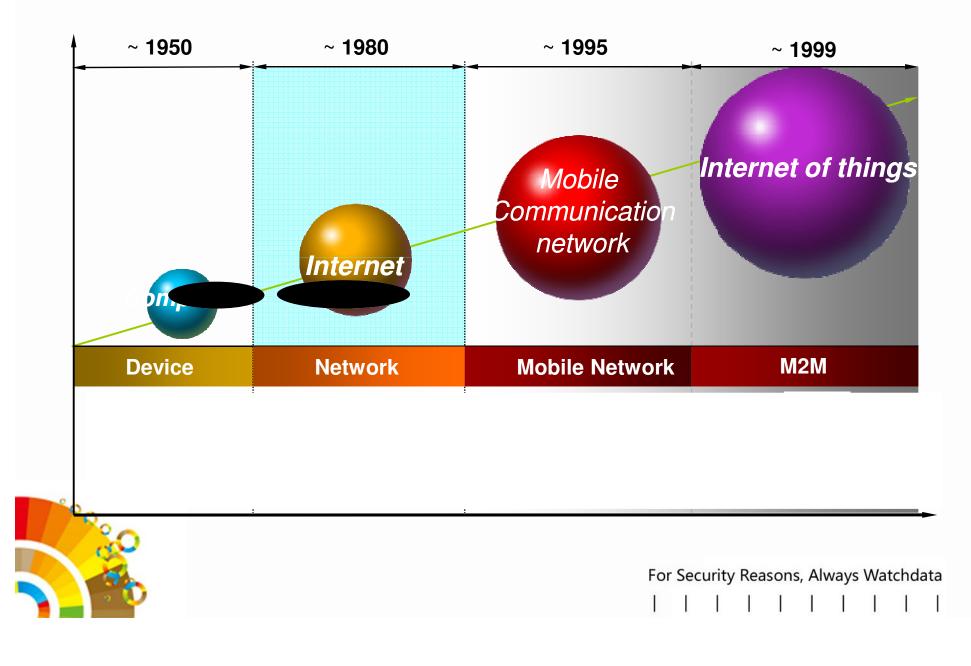

### **Technology Evolution**

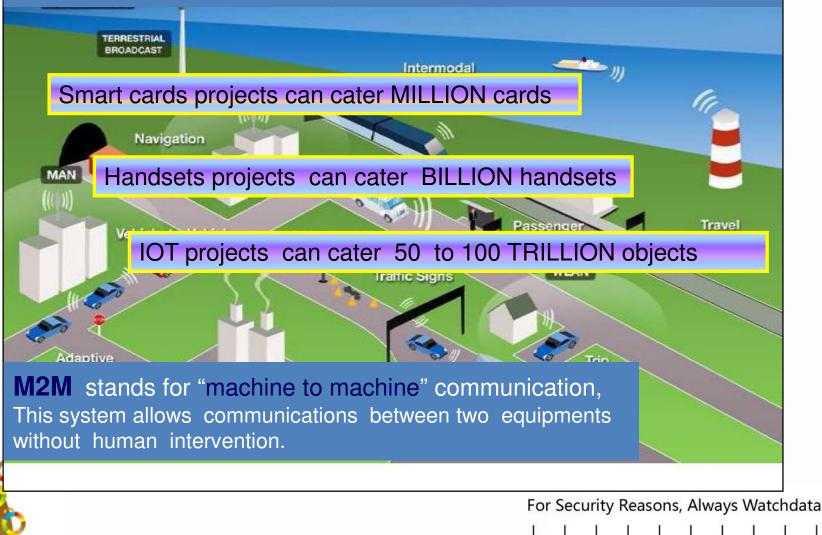

#### **Internet of Things**

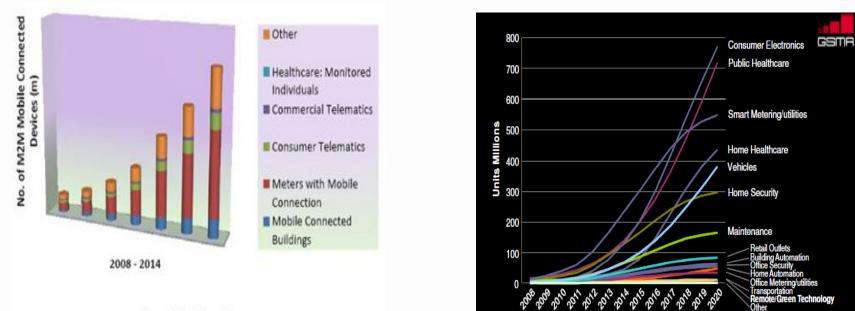

**Internet Of Things (IOT)** refers to a huge network of sensors connecting everyday objects (RFID, Infrared, GPS, Laser scanner, etc....) for identification, security monitoring, control, data transfer.....

### M2M - IOT Market evolution

Source: Juniper Research

It seems there is **NO LIMIT** in terms of :

- Volume
- Revenue
- All industries are concerned
- All regions will deploy

#### **Domains of application**

**Electric power** 

**Enterprises security** 

Identification Traffic signage Alert Stock control Fleet management Data collection Control Monitoring

**Automotive** 

Positioning Quality control Dispatching Data collection Monitoring Security Remote inspection Flow rates control Anti-cloning

**City management** 

Agriculture

**Consumer electronics** 

healthcare

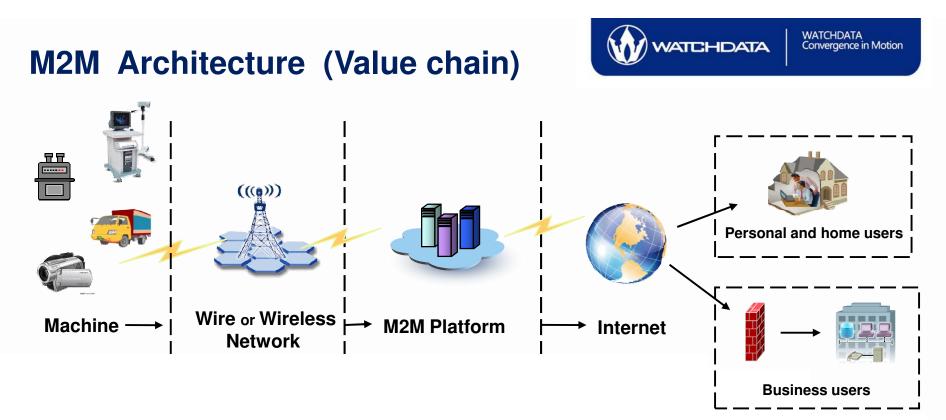

Vending

Household

**Building control** 

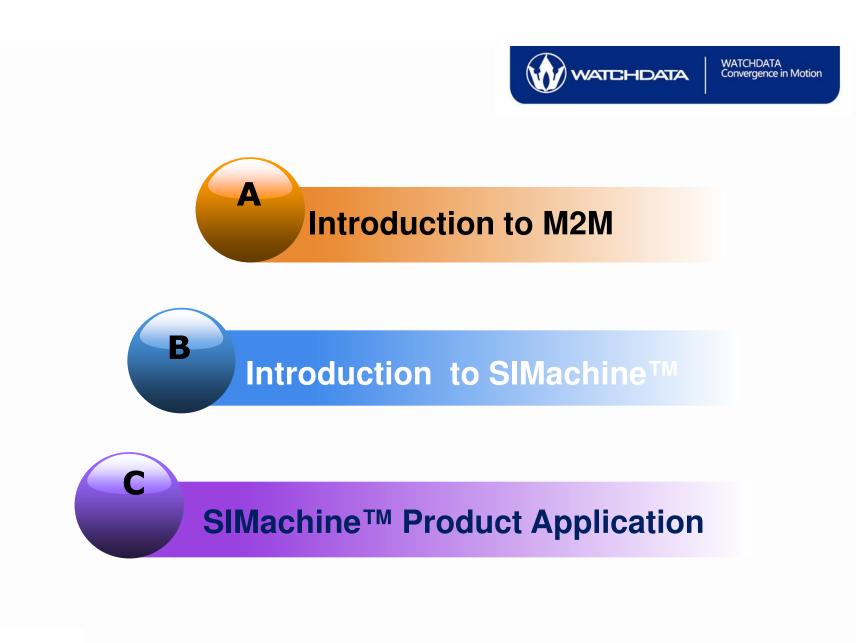

This new market does not require new technologies.

- Miniaturization of devices, chips, sensors will be fully used
- It will use all existing networks (short distance long distance)
- No need of "high speed" networks (data transfer only)

#### Key points to manage

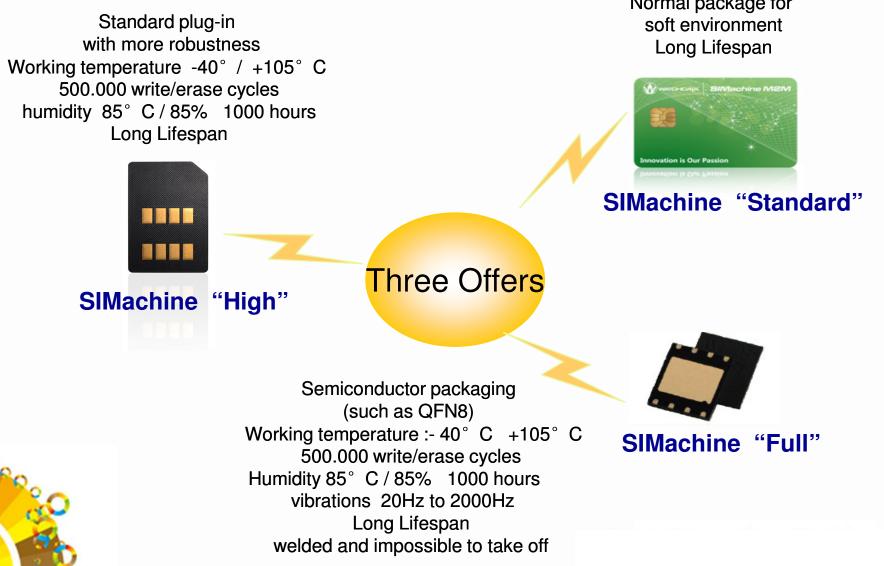

- Administration of big volume of objects
- Real-time treatment
- Security, reliability

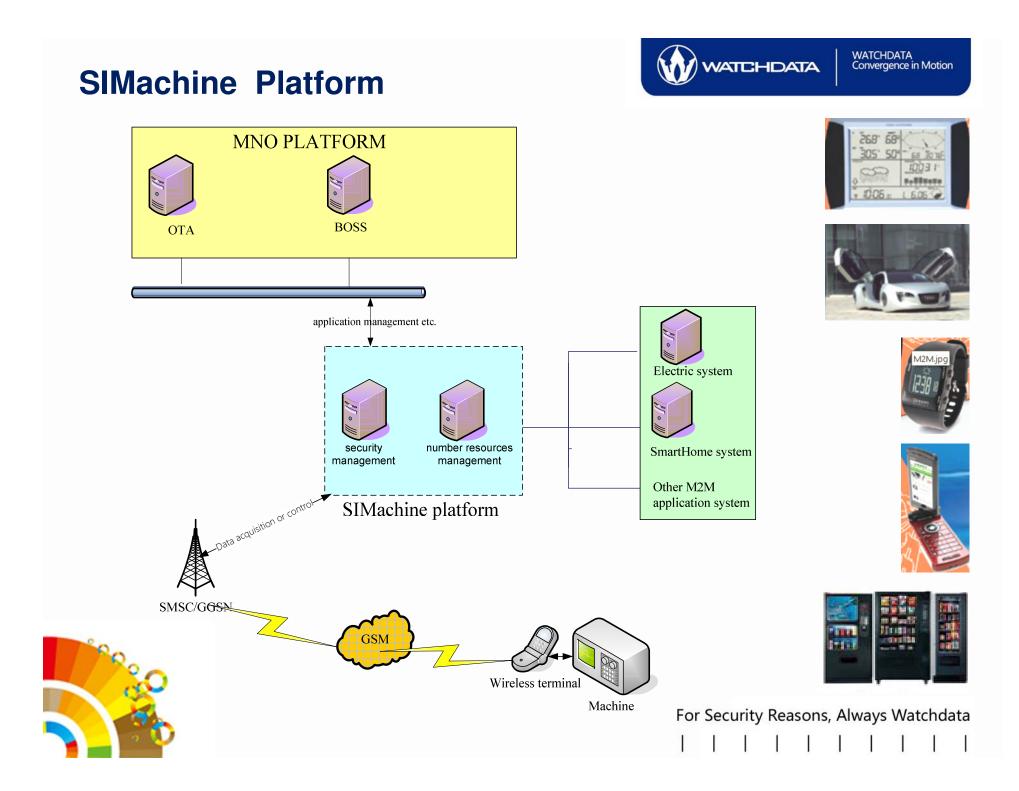

### **Different form factors** for different applications

Standard SIM Normal package for

WATCHDATA

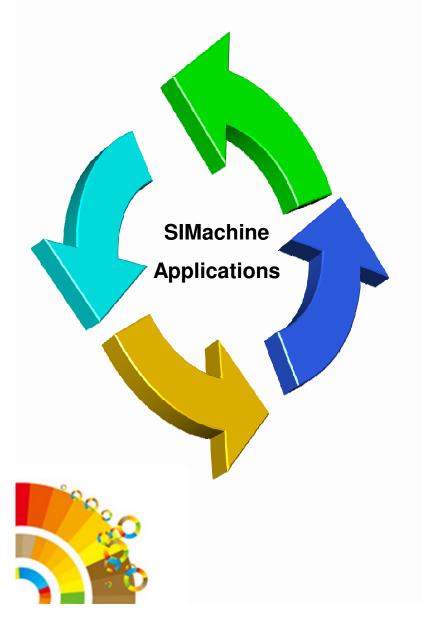

#### **SIMachine Benefits**

- Open unlimited opportunities of business
- Easy to implement
- New source of revenue
- Automatic data transmission
- Suppression of maintenance costs
- Greatly reducing labor costs
- Reduce transcription errors
- Improved work efficiency
- Increase security
- Robust

## **SIMachine Product applications**

#### Electrical power meter

Successful deployment (3.6 million meters) High security "Consumption Management" data collection, authentication, encryption, ...

#### Car embedded applications

Successfully launched with : China Unicom and the ROEWE 350 China Mobile with the NISSAN China Telecom and the BMW Help desk, traffic management, stock market information, chat with friends, internet access, Weather condition, ....

#### SIMachine.energy

GGSN 防火墙 Internet 用户电表 RS485总线 GPRS骨干 ADSL MODE GPRS维沙器 SGSN 用户电表 1 应用服务器 通信服务器 公网接入方案 APN接入路由器 用户电表 电力线波 F GPRS集沙器 GPRS网络 Skidel. 用户电表 小区GPRS抄表 服务器 通信服务 大用户表 GPRS集抄器 专网接入方案 大用户GPRS抄表

The electricity/gas/water company no longer need to visit each household for reading of the electric meters.

#### SIMachine.vehicle

Help driver enjoy the 3G automobile telecommunication services.

#### SIMachine.map

-Locating

-Tracking

-Attendance management

Provides the location-based services by an applet in the SIM card, which can send location information to the service via SMS. We can check the location and tracking line on the server.
